MNC Software Release SNMP Translator for Mosaic

At MNC Software, our philosophy has always been to allow the customer to evolve the system on their terms, with or without our assistance.

To that continuing goal, we are pleased to announce the release of our full featured SNMP translator. With this new utility, simply load in the MIB files, make any customizations and let the translator do the rest. Instead of a turnaround of days or weeks, you can be in control of your new SNMP enabled device within hours.

In fact, if you need immediate monitoring, you can be up and running within minutes and then tailor the device configuration over time. That same capability to evolve over time provides the ability to apply a configuration for one device to another device. Adding a new device within the same family becomes even that much easier.

Features now includes:

1. Selection of which OIDs to monitor.
2. Full SNMP table support
3. Definition of commands which translate into SNMP sets.
4. Trap definition
5. Poll group definition together with poll frequency

ABOUT MNC Software

MNC Software is a forward-thinking and innovative company focused on supplying high-quality software and software services to the aerospace and broadcasting industries. Our engineering team has over 50 years of combined experience developing and integrating mission critical real-time monitor and control systems. We designed, developed, and deployed the first true commercial multi-satellite capable monitor and control system. We developed and integrated various network management software solutions for use in broadcast management, ground station management, and infrastructure management.

In June of 2008, MNC Software was formed in San Diego, California to continue the evolution of what a monitor and control product can and should be. Our prior experience with these disparate monitor and control system requirements and operational philosophies instilled in us the need for the following company-wide principles:

- Superior software architecture
- Highest quality standards
- Exceptional customer communication and support

These principles are evident in our core product, Mosaic, and the consistent high level of satisfaction of our customers around the world. Combined, these have allowed MNC Software to maintain continuous year over year growth even during the recent difficult economic times. This growth has been continuously fed back into Mosaic resulting in the world's most advanced monitor and control solution.

Simply put, our motto at MNC Software, is that we are committed to providing satellite and network operators with the tools and solutions to simplify the complex tasks required of them.

ABOUT RADICA BROADCAST SYSTEMS

Radica is a leading system integrator and equipment supplier based in the UK. For over 30 years Radica has been working with the broadcast radio market around the world and are distributors for 2wcom, Inovonics, Davicom, MNC Software and Nautel.

Radica will be exhibiting at IBC from 9-13th September on stand 8.B38g in hall 8. Email enquiries@radica.com to book an appointment or find out more.
